Colours artificial

But

The process is more data-driven here (kernel smoothing), but is based on the same leading idea. To simply, to see patterns, structure and to tell a story, even if :

- ► None of these routes correspond to real traffic routes
- Edges (airports) may have moved (geography affected)
- Colours artificial

But

• The result is a clear storytelling map (a brilliant one !)

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

USUAL "CHEATERS"

There are many visualisation that transform the data for clarity : Subway maps for example

Source The Guardian

USUAL "CHEATERS"

Subway maps that match the physical reality are quite rare

ヘロト 人間 ト イヨト イヨト

500

Source Benjamin Schmidt

USUAL "CHEATERS"

Ski resort maps are also neither maps, nor pictures, nor projections but paintings!

Source Pierre Novat

We are here in the land of an artist representation of a printed landscape showing both south, east and north-oriented slopes....

WHY "CHEATING" IS SOMETIMES USEFUL IN DATA SCIENCE

We have a file with 2619 learners, following a MOOC with some "steps" and passing 5 tests :

learner id	step	test score
29e3b4d1-f030-46b7-937e-1f70a3609921	1.15	11
4af89f00-d7d1-41a0-84c4-2e3826363c0d	1.15	9
4af89f00-d7d1-41a0-84c4-2e3826363c0d	3.21	10
53ecc918-1f24-43f7-b3d3-c781d814538e	1.15	7
8059bc2c-fc5a-4392-9db0-f35763183c5f	1.15	11
3db74705-e8c3-42ea-80a2-35ec48f24d83	2.12	12
c55f1f9f-fb94-4e83-84ce-b194b956d4b6	4.10	8
c93990be-c458-42df-b870-f389345380cf	1.15	9
e324839b-c897-467a-b3f6-30c3742afeab	2.12	12
0a35c3a3-60f1-4d13-b40a-84627e96101b	1.15	11

Are there some visible patterns? Are learners with good results for one test still good at another? So my first reflex was a plot with all the learners' results over the 5 steps :

Learners' score for each test N= 2619 karners - 10341 observations 12 -

Source: MOOC "Manage your prices", FutureLearn (2017)

BEGINNERS MISTAKE!

With 10341 observation (score x learners) we have a lot of overplotting ! Let us use the good old box-plot

```
Distribution of learners' score for each test (Box plot) N=2619 learners - 10341 observations
```

= 900

LET'S CHEAT NOW !

Let us add some randomness in the data to avoid overplotting

Learners' score for each test N= 2619 learners - 10341 observations

Source: MOOC "Manage your prices", FutureLearn (2017)

<□ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

Let's cheat now !

Let us add some randomness in the data to avoid overplotting

Learners' score for each test (horizontal jitter)

N= 2619 learners - 10341 observations

Now for more cheating with parallel plots !

Learners' score for each test (Parallel plot)

N= 2619 learners - 10341 observations

► We have slightly modified the data using "jitter"²

2. To Jitter= to make quick, small movements

- ► We have slightly modified the data using "jitter"²
- This solves the *overplotting* problem (together with some α-transparency)

^{2.} To Jitter= to make quick, small movements

- ► We have slightly modified the data using "jitter"²
- This solves the *overplotting* problem (together with some *α*-transparency)
- None of the above trajectories exists really

^{2.} To Jitter= to make quick, small movements

- ► We have slightly modified the data using "jitter'"²
- This solves the *overplotting* problem (together with some *α*-transparency)
- None of the above trajectories exists really
- ► The reader should be aware of these little adjustments.

^{2.} To Jitter= to make quick, small movements

- ► We have slightly modified the data using "jitter'"²
- This solves the *overplotting* problem (together with some *α*-transparency)
- None of the above trajectories exists really
- The reader should be aware of these little adjustments.
- \rightarrow Everybody should be allowed to *cheat* sometimes !

2. To Jitter= to make quick, small movements
